

Industrial machine service with a performance promise

PREVENTIVE MAINTENANCE

El-Hy-Mec's high-value PM packages head off costly downtime

It's a fact: Preventive maintenance pays for itself – and then some. PM can head off expensive machine repairs or replacements, and costly unscheduled downtime. Plus, it ensures that your machines remain OSHA compliant. On the downside, you may be too busy keeping up with daily demands and putting out fires to do your own regular PM.

El-Hy-Mec's professional PM—it's productivity insurance

There's no need to pull your operators off a hot project or to let equipment maintenance slide. Whether you need a PM plan or immediate maintenance, El-Hy-Mec offers the industry's most thorough, proven PM program. Following a detailed checklist, we review every machine and function for potential problems, and perform the required maintenance on the spot or at your convenience. We do oil analysis and filter service at a fraction of the escalating cost of new oil. Our process doesn't miss a beat – or a bolt – ensuring that your machines remain up and running for the long haul.

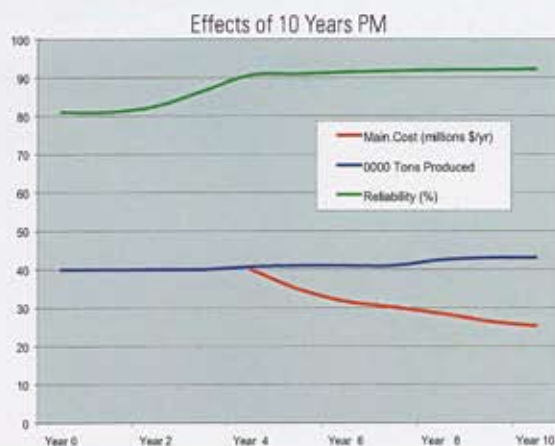

When we've completed the inspection and maintenance, we provide you with a detailed PM report on our findings, as well as a forecast of future maintenance needs. This document serves both as proof of machine compliance for OSHA and as a valuable business decision-making and maintenance scheduling tool.

Special PM packages provide additional savings

As you can see in the examples below, an investment in PM provides significant payback by reducing costs associated with downtime and major repairs. And El-Hy-Mec ups the savings ante with special, economical PM packages tailored to your company's size, specific needs and maintenance schedule.

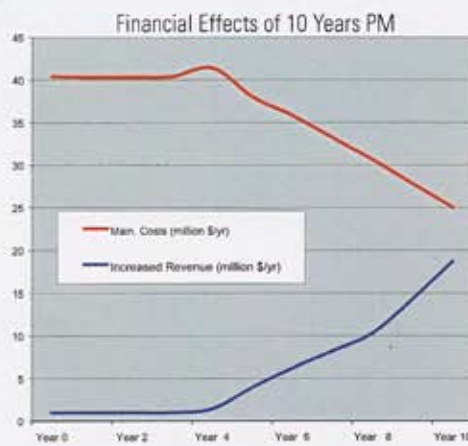

"I believe a breakdown was prevented when you found a pinched cord during routine preventive maintenance. In the past, we were too busy putting out fires from breakdowns to even consider PM. You've proven that it does work. Keep up the good work!"

Ted Huot
Huot Manufacturing Company

During the first three years of the PM program, maintenance costs were reduced by 40%. Reliability and production throughput increased steadily to a total of over 92% (time and quality performance)

Graph information obtained from studies made by IDCON, INC. (www.idcon.com)

The PM program resulted in a savings of \$17 million annually. The value of increased and sold production represented \$18 million annually (\$ values are per year).
